## PRESSURE SEAL FORMS

For PrintBoss customers who print large quantities of checks and/or invoices Wellspring Software has introduced pressure seal forms.

## With pressure seal forms the 'print-to-mail' process is reduced by up to 90%!

The process is concise and simple because you use a PrintBoss form that is designed to print onto the pressure seal stock. This means that the standard process of printing, folding, stuffing and sealing forms to send them out is reduced to simply printing and then running the forms through a folding machine. For checks, even if you use PrintBoss to only place a signature on the check, the process is just running the forms through a printer and then a folding machine.

For both checks and invoices you eliminate the need for envelopes and the laborious task of stuffing and sealing the documents in an envelope.

In order to implement a pressure seal solution you will have to confirm that you can print onto the special pressure seal stock, and you will have to purchase a folding machine that will accommodate the quantity of forms you need to print.

Call Wellspring Software to confirm that pressure seal forms are a right fit for you.
