Wellspring Software

PRINTER RECOMMENDATION
(For use with PrintBoss)

PrintBoss is designed for use with LaserJet printers and will <u>not</u> work with dot matrix printers.

We recommend printing checks using a Hewlett-Packard LaserJet printer. **Please note that any printer used with PrintBoss must be <u>100% HP compatible and PCL5e or PCL6 compatible</u>**. PrintBoss is not compatible with all PostScript printers.

Hewlett-Packard (HP) Series II and Series III printers are slow, so we don't recommend using these printers. The HP II in particular has such limited font choices that you may not be able to format your check correctly.

Your bank <u>may or may not</u> require that you print checks with MICR toner. Please check with your financial institution to determine requirements for check printing.

When Hewlett-Packard releases a new printer, MICR toner for that model is usually available shortly after the new printer starts shipping. If you are considering a newly released HP LaserJet printer or any other brand, please call Wellspring Software to confirm that MICR toner will be available for your printer. Sometimes there is a delay between the release of a new printer model and the availability of MICR toner. MICR toner is not necessarily available for all printers.

To determine which HP LaserJet printer is best for your situation, we suggest that you consider two primary factors:

1. **SPEED**

   How many checks per minute do you need to print?

   The pages per minute (ppm) rating of the printer will give you a very close approximation of checks per minute.

2. **COST**

   How much money is budgeted for the purchase?

   Be sure to take into consideration the initial purchase price, maintenance expenses, cost of toner and printer durability.
